

Parking Lot Finder

Smart Parking Management System

Problem Statement

A smart, user-friendly, and responsive parking management platform that helps drivers find and book parking spaces easily while enabling parking operators to manage their facilities efficiently.

Objectives

- Reduce the time spent searching for parking spaces.
- Provide real-time parking availability information.
- Enable online parking slot booking.
- Offer an AI-assisted parking search and booking experience.

Features

- User Registration & Login
- Search Parking Lots
- Interactive Map View
- Location-Based Filtering
- Availability Indicators
- Parking Slot Booking
- Notifications & Alerts
- AI Chatbot Integration (Dialog flow)

Technologies Used

- React JS
- React Router
- Bootstrap / CSS
- Dialog flow Chatbot
- Git, GitHub

Future Scope

The future scope of the Parking Lot Finder system includes real-time IoT-based parking monitoring, online payments, AI-driven recommendations, mobile applications, QR-code access, EV charging support, and smart city integration. These enhancements can transform the system into a comprehensive intelligent parking solution that reduces traffic congestion, saves time, and improves urban mobility.
